

W2 Exercises

📌 Find TAs if you encounter any questions!

Task 0: Download Datasets

- Make sure you have already download the datasets: `county` and `loan50` before you begin the exercise! [click here](#)
 - Also check if the files are in your working directory!

💡 Hint: create a folder to store all datasets for this semester!

Task1: Import Data

- Download and Import the package `ggplot2` for data visualization
- Import the datasets `county` and `loan50`

Task 2: Scatter Plot

- Use `county` to draw a scatter plot of `unemployment_rate` (x-axis) and `per_capita_income` (y-axis)
 - **Hint:** You don't need to specify any parameters in `geom_point()`
- Draw the same graph again, but this time make the following adjustments:
 - adjust the point color to `lightcoral`
 - adjust the point size to `0.5`

Task 3: Histogram

- Use `loan50` to draw a histogram of `loan_amount` (x-axis), and adjust the parameter `binwidth` in `geom_histogram()` to 5000.
