

W3 Exercises

- ♥ Find TAs if you encounter any questions! Office hours are also available by appointment! (Stat questions are welcome!)

Task 0

- Make sure you have download the datasets: `county` and `loan_full_schema` [click here](#)
- Check your working directory

Task 1: Coding Styles

- Check if your `RStudio` project is saved in well-organized folders
 - If not, you know what you should do!
 - **Hint:** You should at least create a folder for all datasets
- For the following questions and later exercises, please follow the coding styles!

Task 2: Contingency Table

- Use `loan_full_schema` to create a contingency table by `loan_purpose` (row) and `application_type` (column)
- Add the sum row and sum column

Task 3: Bar Plot

- Use `loan_full_schema` to draw a bar plot to show the numbers of applicant according to each credit grade by the following steps:
 - Step 1: specify `sub_grade` as the x-axis and fill the bar with `grade`
 - Step 2: add a title and axis labels
 - Title: `Number of Applicant by Credit Grade`
 - x-axis: `Credit Grade`
 - y-axis: `Number of Applicant`
 - Step 3: center the title
 - **Hint:** add `theme(plot.title = element_text(hjust = 0.5))`
