

W4 Exercises

Try to complete the exercises **on your own!** We both know that LLMs can solve them in seconds

Task 0

- Remember to keep your files in well-organized folders like what you have done last week!

Task 1: Uniform Random Sample

- Set random seed as `2026`. Draw `200` observations from uniform distribution $[0, 100]$ and compute the mean of the observations

Task 2: Histogram

- Use the random sample you just generated and create a dataframe to store the observations
- Draw a histogram to see the distribution
- Draw another `10,000` observations from uniform distribution $[0, 100]$ and draw a histogram to see the distribution
